4WD CV SHAFTS

Featuring CV Shafts to suit over 180 4WD applications, the new Roadsafe 4WD CV Shaft range covers the majority of common application demands. The high quality CV Shaft assemblies are supplied complete to include all necessary hardware and are guaranteed to fit correctly as per OEM Specifications. The range also includes Heavy Duty (externally greasable shafts) compatible with 76/78/79 Series, plus a key range of shafts modified from the OE design to ensure cage alignment promoting good strength and wear characteristics on lifted applications.

- CV joints machined accurately and precisely with hardening where required.
- High torsion steel axle shaft with protective coating to prevent corrosion.
- All rolling components, race and ball tracks precisely machined to ensure smooth and quiet operation and long life.
- All splines hardened and machined to OEM specification.
- High quality neoprene CV boots fitted with quality stainless steel clamps.
- Top quality long lasting moly grease used in CV joints.
